Police parade two minors with shaved heads in Hisar, delete videos after row

Kumar Mukesh | TNN

Hisar: Hisar police have courted controversy after allegedly parading two detained juveniles through a local market with shaved heads while uniformed personnel and social media influencers filmed the act.

The incident had occurred after the police apprehended the two minor boys in connection with an Oct 24 firing case outside a scrap shop near Barwali Dhani, Hisar, and seized a.315-bore illegal firearm and a motorcycle on their disclosure. An FIR for attempt to murder and under Arms Act had been registered against them.

The minor boys were held in connection with an Oct 24 firing case

Police were also accused of engaging influencers to circulate the footage

Police were also accused of leaking juveniles' unmasked videos and names to media groups and engaging influencers to circulate the footage, a violation of the Juvenile Justice Act. Under Section 74 of the Act, publishing the name, address, school or any identifiable photo or detail of a conflict-of-law juvenile is prohibited, carrying penalties of up to six months' imprisonment and a Rs 2 lakh fine.

Police later retracted a press note and deleted the videos. Spokesperson Madan Lal claimed that the juveniles' heads were already shaved before detention, maintaining that the minors were merely being taken for a crime scene reconstruction.

Man sets house on fire, held

Hisar: Police have arrested a man for allegedly setting his house on fire over a domestic dispute at Bodiwali village in Fatehabad district.

The action was taken on a complaint filed by the wife of the suspect, identified as Balbir. She alleged he was an alcoholic who harassed her and their children regularly. On Oct 4, while the wife was away with her children, Balbir allegedly set the house on fire in an inebriated state, destorying clothes, bedding, utensils and other goods and damaging the room's ceiling. GLASS, FACADES AND FENESTRATION

READER ENGAGEMENT INITIATIVE

Beyond the surface

From high-performance glazing to sustainable facade and fenestration solutions, advances in materials and design are changing how buildings interact with people and their surroundings

Respedit.Chennai
@timesofindia.com

A building's character is often defined by its most visible elements, from windows and doors to exteriors. Yet some of the most significant developments in modern architecture lie in what these elements can do. A glass facade can help regulate indoor temperatures, a well-designed window can improve ventilation, and an intelligently engineered building envelope can cut energy bills. What was once largely about appearance now shapes how a building performs.

This shift is bringing glass, facades, fenestration and aluminium systems into sharper focus. Across residential, commercial and institutional projects, architects and developers are looking beyond conventional solutions, placing greater emphasis on durability, safety and the changing needs of the people who use these spaces.

MATERIALS THAT DO MORE

Advances in glazing technology, thermal insulation and precision-engineered aluminium systems are widening the possibilities of contemporary construction. High-performance glass can manage heat and natural light, while improved framing and sealing solutions deliver better acoustic insulation. Automated windows, smart shading systems and adaptable facade designs give occupants greater control over indoor environments, allowing buildings to respond more effectively to external conditions.

DESIGN WITH PURPOSE

Sustainability is influencing how construction materials are selected, manufactured and maintained. Recyclability, resource conservation and long-term performance are drawing greater attention as the industry looks for ways to minimise its environmental impact.

These developments are also drawing architects, engineers, manufacturers and developers into closer collaboration, with innovation increasingly driven by the need for solutions that are practical, cost-effective and suited to different climatic conditions.

Ultimately, the value of a modern building lies not simply in the statement it makes on the skyline, but in the experience it offers within. As technology and architecture become more closely integrated, the next generation of buildings will be judged as much by how they perform as by how they look.
